

Slope Stabilization along the Niantic River

Niantic, CT

Client

CT Military Department

Completed

2005

Description

Zuvic Carr provided design and CT DEP permitting of slope stabilization (800') along the Niantic River.

The project, located within the Camp Rell military complex, included subsurface investigation and characterization of soils, evaluation of several soil stabilization methods, and selection of plantings compatible with the soil type and river environment.

Zuvic Carr also designed a site stormwater infiltration collection system, the retaining wall, shown above, and provided construction coordination and inspection oversight services for the military.
