

MDC Ultraviolet Disinfection Facility

Hartford, CT

Zuvic Carr's NICET IV Inspector inspected cast-in-place concrete installations for the UV building, electrical building, primary effluent channel, associated excavations, and site work.

Client

Woodard & Curran

Completed

2011

Description

The Metropolitan District (MDC) constructed a new Ultraviolet (UV) Disinfection Facility as part of its secondary treatment process at the Hartford Water Pollution Control Facility. CH2M HILL and Woodard & Curran were the design engineers.

Zuvic Carr's NICET IV Inspector provided full-time professional construction inspection assistance to Woodard & Curran during a 10-week peak period of construction for the UV Disinfection Facility. Zuvic Carr inspected cast-in-place concrete installations for the UV building, electrical building, primary effluent channel, associated excavations, and site work.
