

Goodwin College Riverside Campus

East Hartford, CT

Client

Goodwin College

Completed

2008 Construction

Engineering services ongoing

Description

Zuvic Carr completed the site survey, site, civil and utility design, and associated town and state permitting for the construction of a 109,000 sq. ft. campus building located on the east bank of the Connecticut River in East Hartford.

Specific tasks included the preparation of a boundary and topographic survey, site grading, utility design, site lighting design, landscaping, and the design of an extensive stormwater collection system with a direct discharge to the Connecticut River. The project also included the design of more than 2,000 linear feet of campus roadways, improvements at the intersection of Ensign Street with Riverside Drive, and campus parking lots to accommodate more than 450 vehicles.

The site formerly supported petroleum terminal storage and transfer facilities, and Zuvic Carr completed the monumental task of managing the site's environmental cleanup. Learn more at <http://youtu.be/oEx2hgwhjS8>
