

Travelers Insurance Hangar Expansion

Windsor Locks, CT

Client

Travelers Insurance

Completed

2008

Description

Zuvic Carr completed the site design associated with the 10,400 sq. ft. addition to the existing hangar and office area at Travelers' Corporate Aviation Division.

Tasks included relocation of existing utilities, grading associated with the reconstruction of the apron, and the design of an underground tank system to contain fuel and fire water in case a fire or spill occurs inside the hangar.

Zuvic Carr also designed and permitted a Jet A fueling system for refueling fixed wing and rotary aircraft. This system included two 12,000 gallon underground storage tanks, an enclosed fueling cabinet containing the pump, fueling hoses and related appurtenances.
